

PRESS RELEASE

For Immediate Release

Lenexa, Kansas, January 29, 2014 - Tim Hibbard, CEO of EnGraph Software, announces the formation of a partnership between EnGraph and Radio Engineering Industries Inc. (REI) to provide a complete suite of intelligent transportation and mobile asset management solutions; including Fixed Route CAD/AVL, Automatic Passenger Counting (APC), Paratransit Scheduling and Billing software, Mobile Data Terminals (MDT), electronic manifests, traveler information websites, Passenger Information and Display Systems (PIDS), mobile video surveillance, vehicle monitoring and diagnostics, and more, to the transit industry.

Radio Engineering Industries (REI) provides a variety of safety solutions: mobile video surveillance, GPS/AVL tracking solutions, camera observation systems and audio/video equipment. REI prides itself on designing, manufacturing, and servicing customer friendly electronic products for the school, transit, motor coach, shuttle and agriculture industries. Founded in 1938, REI continues its history of service, quality and value every day. EnGraph Software, founded in 1999, is a software development firm specializing in paratransit scheduling, reporting, billing and digital dispatching systems throughout the United States.

Darwin Rubeck, REI Vice President of Software and Business Services, called the partnership with EnGraph Software "a terrific opportunity to complete our intelligent transportation systems offering and to bring Paratransit expertise to our team." Tim Hibbard, EnGraph CEO, is "thrilled to join forces with a nearby midwestern technology company like REI and I know that our proven ParaPlan® demand-response management system is a perfect fit into REI's A.R.M.O.R.® ITS software applications and component hardware" and further "this is a great step forward for both REI and EnGraph."
